Purchasing System is the System of Record for Vendors

Invoice Search/Edit

Invoice Entry

Ability to add entire PO's or individual line items from a PO to invoices – either check individual items or choose a 'Select All' button. Ability to specify a percent of selected items.

- Once PO's or lines on PO's are added 100% to an invoice they are no longer available to be added to an invoice, i.e. they are closed. This is a control measure (i.e. can't pay for the same items twice). It will also keep the list of available PO's to add to invoices manageable (and prevent having to scroll through a huge list).
- On the enter invoice screen you should choose vendor and only open PO's for that particular vendor should be listed.
- Only committed PO's should be available to add to invoices (not drafts).
- Won't allow the same invoice number to be used for the same vendor more than once
